

F100 Firmware upgrade

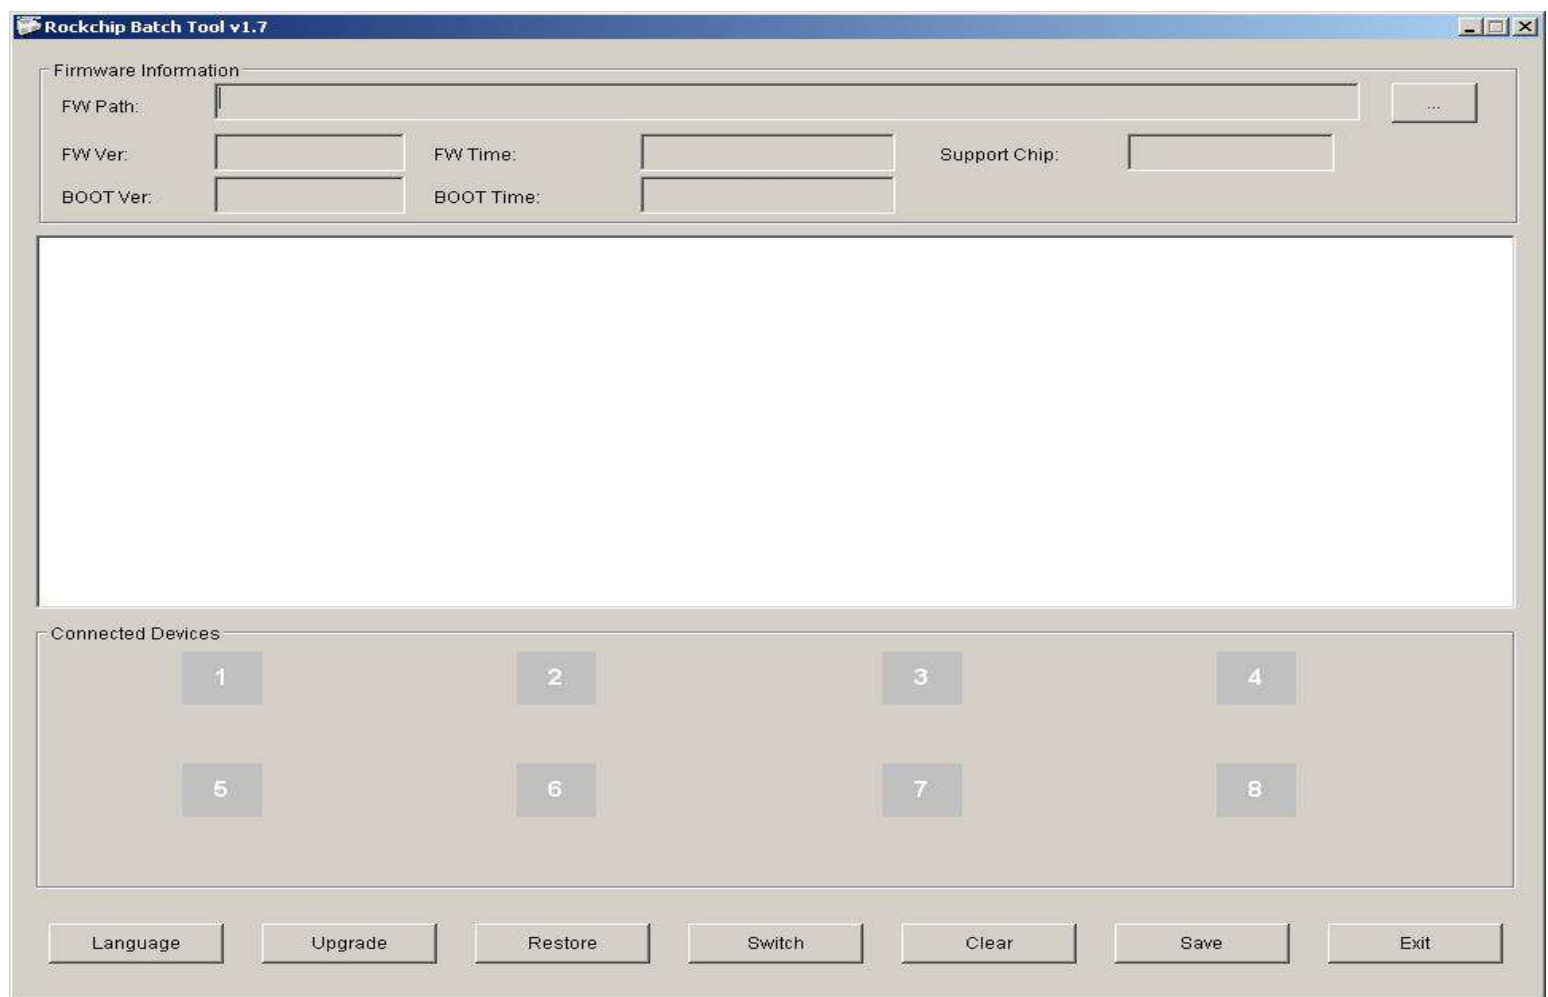

1. Please follow the steps below to upgrade the F100 firmware.
2. Unzip the "upgrade tools" file, then you should get 3 folders: "BatchTool", "Driver" and "Firmware"
3. Open the "Driver" folder, then Double click on the driver install file "**DriverInstall.exe**" and select "Install Driver".

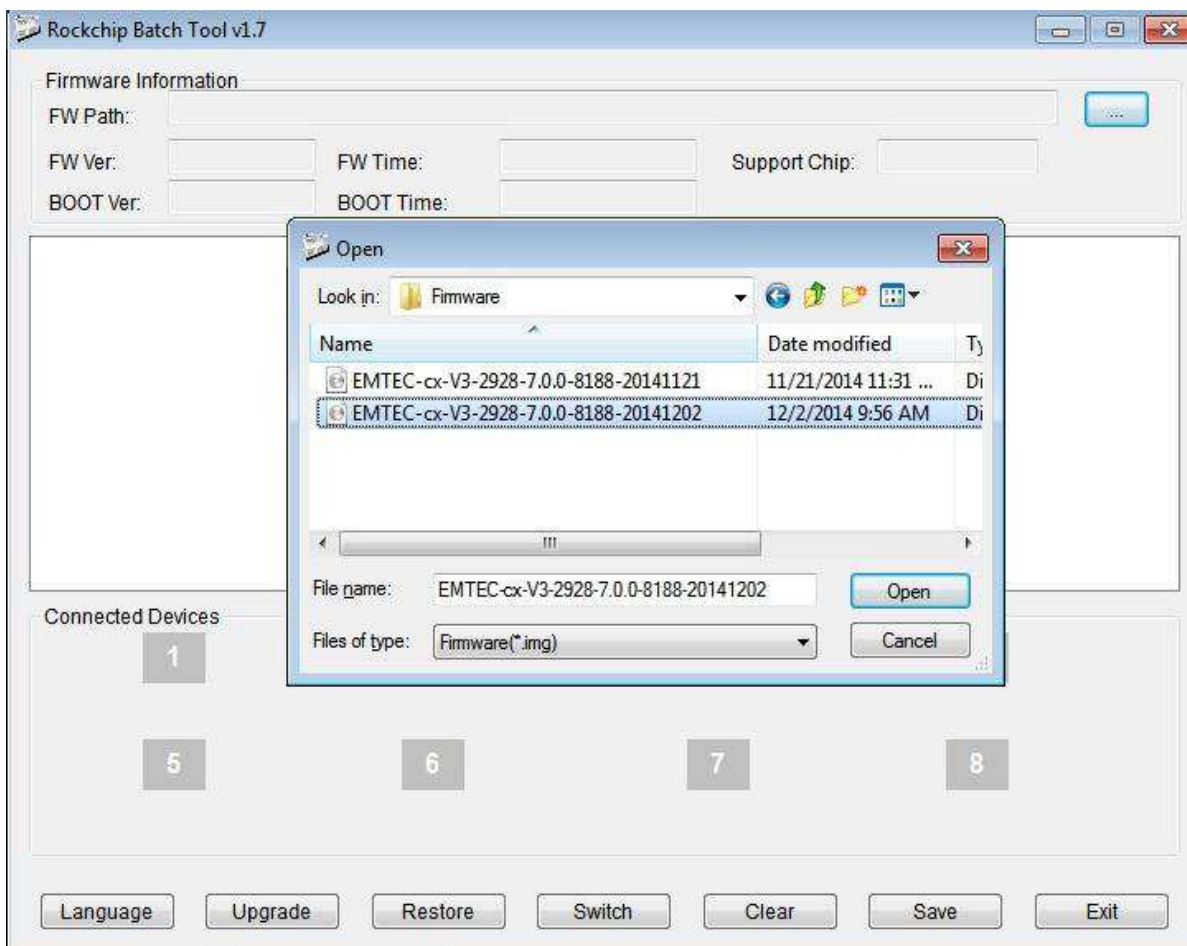

4. Click on "install" (win7/vista) to install the driver and "ok" when finished. Then close the program "DriverInstall".

5. Open the "BatchTool" folder, then Double click the upgrade tool "**RKBatchTool.exe**".

6. Click the  button and choose the firmware file "EMTEC-cx-V3-2928-8.0.0-8188-20150415.img".

5. Click the  button.

6. Connect the USB cable to the computer.

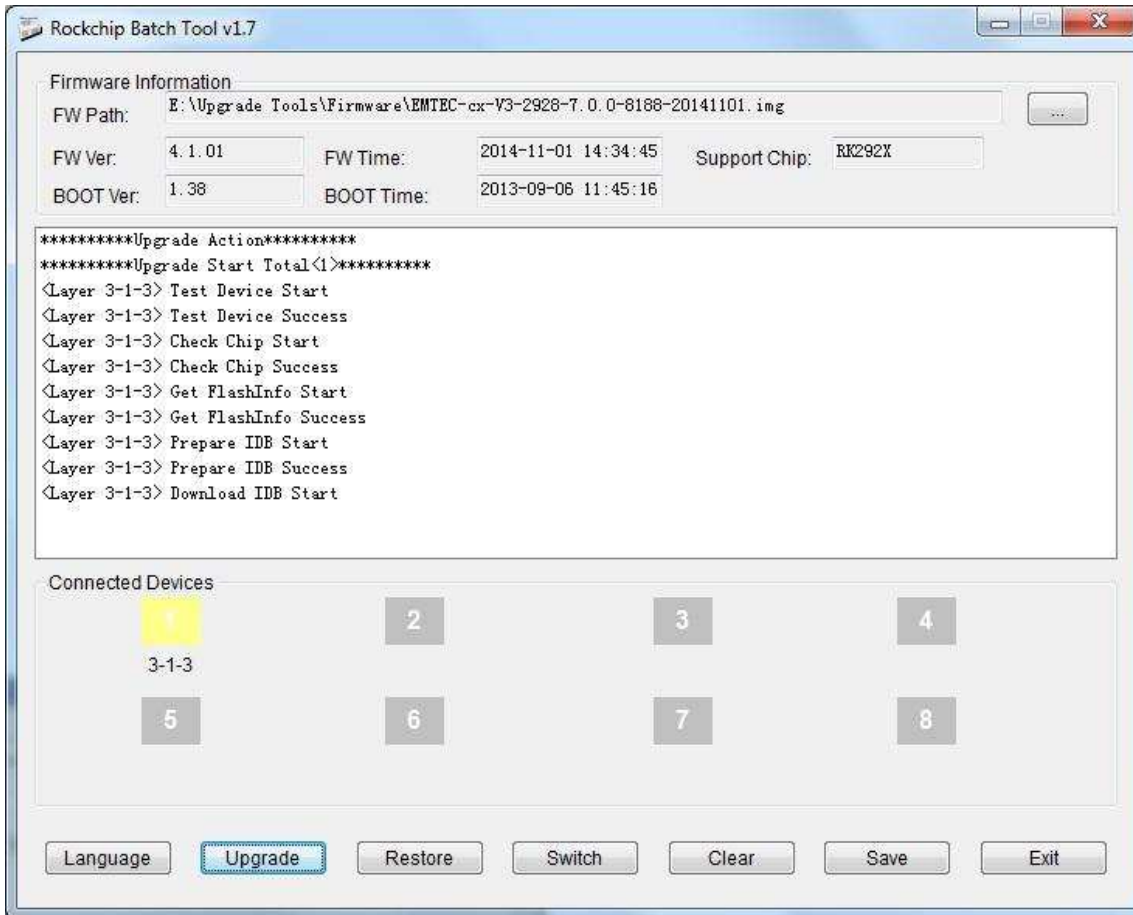

7. Press the **Fn** button and hold it (do not release).

8. Connect the Micro USB cable to the F100 dongle.

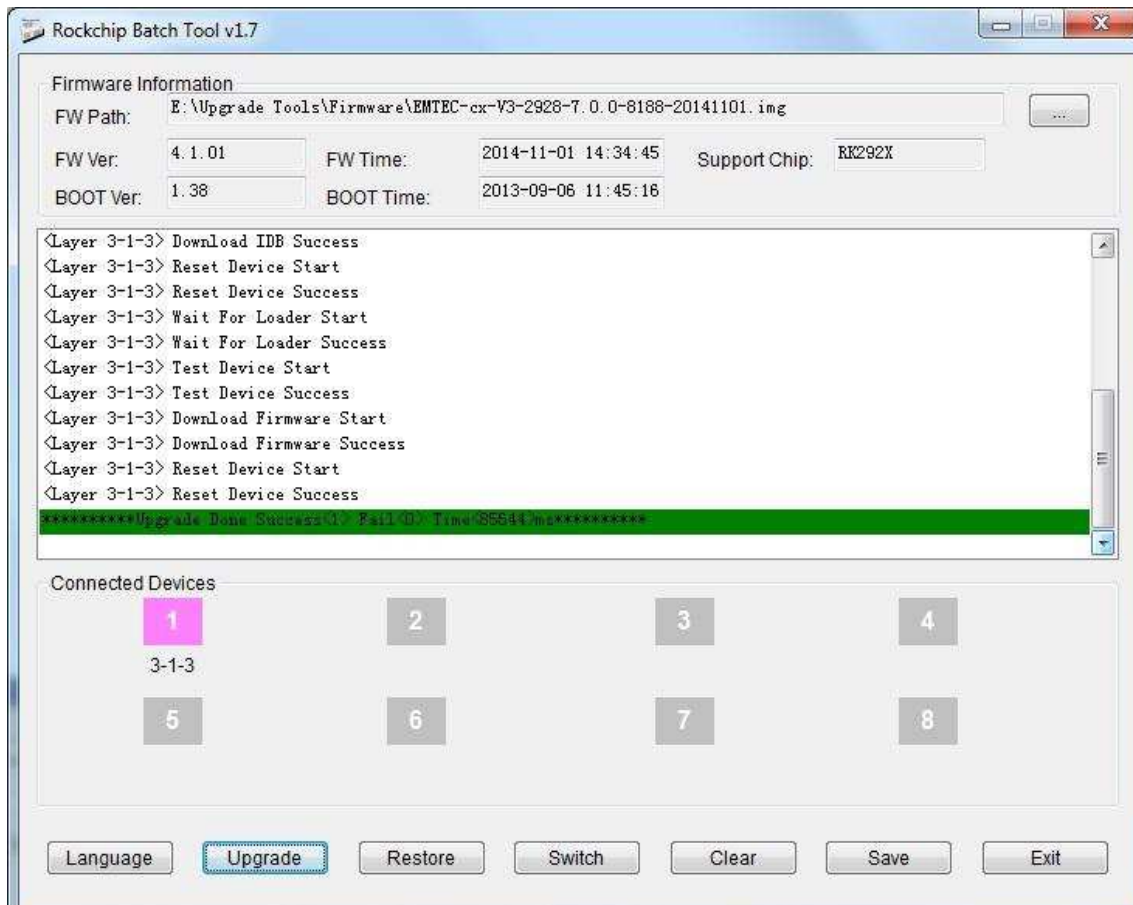

9. 3 seconds later release the **Fn** button (Connected devices color for the number "1" should be GREEN).

10. Click  button to start the firmware upgrade:

11. After around 2 minutes, it should display a message "upgrade done success".

12. Press EXIT to close and unplug the F100 USB dongle
